# **Madonna's surgery explained after her unrecognisable Grammys look**

Pop icon Madonna shocked fans on Sunday when she appeared at the 2023 Grammy Awards sporting a "new face", adding to speculation that she has undergone cosmetic surgery.

The singer, 64, looked almost unrecognisable at the annual awards ceremony on 5 February with viewers taking to social media to speculate about procedures she may have had done.

**Now, Dr. Michael Horn, a board certified plastic surgeon from Chicago has weighed in on the debate, revealing he believes Madonna has most likely had work done on her face over recent years.**

**Speaking to DailyMail.com, the surgeon outlined the different procedures he believes the singer has undergone, including a facelift and nose job.**

**"Over the years, Madonna, has seemingly undergone numerous plastic surgery procedures," he told the publication.**

**Revealing why he thinks she's had a facelift, Michael explained: "This is obvious because her skin is tight and pulled back with no wrinkles. Her eyes also seem smaller, likely due to being pulled during a facelift."**
